1. Tonnes purchased may be slightly higher than the sum of tonnes in all price ranges as some fruit does not have a price specified. 2. Where there are fewer than three purchasers of a variety, the average price and total value are not reported. 3. The estimated non-response rate nationally is 15%; however, the non-response rate varies for each region. Generally, regions with more small wineries and less purchased fruit will have higher non-response rates. As the number and identity of respondents can change from year to year, changes in the size of the crush can be partly attributable to changes in the non-response rate.
